

GIS & Spatial Services

Customising mapping and data capture to drive efficiency

e2m.com.au

At E2M, we integrate technology-driven solutions to enhance efficiency and deliver actionable insights for our clients.

Our GIS and Spatial Consulting are experts at interpreting and analysing data to facilitate better decision making for your projects.

Experience drives efficiency

Our team comprises GIS and Spatial specialists with extensive experience working with environmental professionals to achieve balanced environmental outcomes.

Our highly qualified and experienced team of Terrestrial Ecologists work with our GIS and Spatial specialists to implement the latest technologies for data capture and mapping solutions. Our aim is to drive down costs and improve efficiencies for our clients on every project we're involved with.

Data Capture and Management

Our data capture and data management solutions are safe, reliable, secure and accurate, resulting in more balanced and commercially informed environmental outcomes for our clients.

Why E2M

Technology driven ecology

Advanced GIS and remote sensing technologies interpret complex environmental data to address regulatory requirements, optimise land use, and minimise environmental impact.

Custom data solutions

Customised data capture methodologies and mapping solutions underpinned by field knowledge deliver targeted and efficient insights.

Efficiency and innovation

Our unique knowledge of the Queensland ecosystem fast tracks project approvals, drives cost savings, reduces project timelines, and supports compliance.

Services

We provide safe, reliable, secure, and accurate data capture and management solutions, to deliver balanced environmental outcomes.

Our services include:

Cloud based GIS and Spatial data analysis

Data acquisition and data capture programs

Remote sensing

Data storage, management and modelling

Cartography / map production

Meet our Expert

Cameron Davey

Cameron is our Chief Commercial Officer and leader of the GIS and Spatial service line. As the leader of data, systems and technological innovation, his focus on finding new ways to deliver value through technology brings unparalleled efficiency for our clients and inspiration for our people.

Meet the Team

Danielle Lane

A senior and highly skilled spatial officer with significant expertise in data management and cartography, Danielle applies her expertise in developing bespoke data capture solutions for our clients across Queensland. Her specialist skills include python scripting, cartography, data management and data capture.

We bolster data capture with field based experience and insights to drive accuracy and efficiency in your projects.
